

## Uses of Negative Potentials

The human body has one positive charge and four negative charges. But with the growth of age (in the current era of advanced technology, mobile phones, computers, etc.), the negative electricity of the body has been decreasing, so there are many imbalances in the body, and people with more positive electricity have weak immunity, prone to chronic diseases, and an acidic constitution.

Removes free radicals from blood vessels (cause for cancer)

Alzheimer's disease.

Negative potential → vascular scavenger, neutralize free radicals, lactic acid, and stay away from the threat of chronic diseases!

Acting on the human body, it can rearrange the irregular movement of the positive charge of the human body

The reduction electron therapy that has been researched and developed for many years is a therapy method that uses the energy of natural elements and uses an ion converter to produce reduced electrons similar to natural negative ions and inject them into the human body. This reduced electron is completely harmless to the living body, has no side effects, and can inhibit the acidification of cells and improve the activation of cells. When the metabolism is active, the endocrine balance can be stabilized and the immunity can be greatly enhanced. In addition, it acts on the hypothalamus of the brain and makes the autonomic nervous function strong. Therefore, the functions of organs and various tissues can be activated, which has a good effect on the improvement of diseases and the prevention of diseases.

Why do people age? Why do we get chronic diseases? Why is it difficult to cure? Since ancient times, Chinese and foreign scientists have been constantly exploring. All human beings, including hair, skin, bones, muscles, brains, and internal organs, are composed of about 60 trillion cells. The process of human aging is also the process of cell aging, pathological changes, and death, and the process of people getting chronic diseases is also the process of cytopathic disease, which leads to the decline of the functions of various organs of the human body. Causes of cell decline and disease: Microcirculation is blocked, blood flow is not smooth, cells cannot absorb oxygen and nutrients supplied by blood normally, and cannot metabolize waste normally, and cells begin to weaken, age, lesion, and die.

## Efficacy of Negative Potential Physiotherapy

### 1. Blood Circulatory System

1. Purify the blood, change the pH of the blood, gradually turn the acidic blood into weakly alkaline, dredge the blood, decompose and peel off the deposited plaque on the blood vessel

wall, and achieve the purpose of unblocking the blood vessels and regulating blood pressure. 2. Dilate coronary arteries and peripheral capillaries, improve myocardial nutrition, strengthen myocardial contractility, improve systemic blood return, and maintain cardiovascular health. 3. Improve the quality of blood cells, increase blood oxygen content, eliminate general fatigue, and prevent excessive fatigue. 4. Adjust blood sugar, reduce blood lipids, blood viscosity, soften blood vessels.

## 2. The Nervous System

1. Improve the nutritional status of the brain, reduce and eliminate functional disorders caused by cerebral hypoxia, improve sleep, enhance memory, and delay aging. 2. Adjust the autonomic nerve, and gradually eliminate the disordered state of the nerve. 3. Improve the pain threshold, which has sedative and soothing effects.

## 3. Respiratory system

1. Negative air ions help to strengthen the movement of mucous epithelium and cilia, improve lung respiratory function 2. Increase oxygen intake and carbon dioxide output, and promote redox reactions. 3. Enhance respiratory immunity and relieve bronchospasm.

## 4, The Digestive System

1. Promote the secretion of digestive juice and increase appetite. 2. Speed up gastrointestinal motility, repair the stomach wall, and prevent the spread and development of ulcers. 3. Improve the absorption of nutrients.

## 5. The Endocrine System

1. Regulate pituitary hormones to keep them healthy and active. 2. Improve the functions of the endocrine system, such as the pancreas, thyroid, kidney, and prostate.

## 6. Metabolic system

1. Regulate the metabolism of blood sugar, protein and lipid, and maintain the stability of blood sugar, blood lipid and lipoprotein. 2. Enhance liver and kidney detoxification and detoxification function. 3, Clear the sweat glands, dehumidification, heat, cold, detoxification. 2. Enhance intestinal peristalsis, laxative, and improve the excretion of metabolic waste.

## 7. Urinary system

1. Regulate kidney function, improve the internal environment of the kidney, and help repair kidney damage. 2. Diuretic, detoxification, and acidifying substances

## 8. Skeletal system

1. Regulate Ca, Na, P, K plasma 2. Reduce calcium loss and increase bone density 3. Inhibit bone and joint damage, accelerate fracture healing and joint repair.

## 9. Immune System

1. Activating cells, enhancing physical fitness, and improving the repair function of the human body. 2. Improve the recognition and response of white blood cells and lymphocytes, strengthen the phagocytic function of macrophages, and improve immunity. 2. Increase the reasonable ratio of T cells and globulin, and increase natural killer cells (NK Cell). 3. Anti-inflammatory, bactericidal, reducing free radicals Negative Potential Therapeutic Apparatus Main Functions of the Four Potentials Negative Potential Actions Ordinary alternating current, after high-tech treatment, forms a high-voltage electrostatic field, placing people in this electric field, and applying electric field loads to the human body Conditioning. At this time, all parts of the body will resonate, adjust the balance of each organ, ease the tendency of aggregation, and promote the decomposition and metabolism of excess nutrients and toxic and harmful acidic substances in the body. 1. Purify blood, promote blood return, improve microcirculation, decompose and strip macromolecular lipid waste. 2. Regulate blood pressure, reduce blood lipids, blood sugar and blood viscosity. 3. Improve the blood supply and oxygen supply function of various tissues and organs in the body Blood pH. 4. Start metabolism and adjust blood pH. 5. Improve the activity of the hypothalamus and enhance the nerve conduction function. 6. Eliminate abnormal brain waves, brain magnetic waves, and regulate endocrine. 7. Improve brain blood supply, eliminate headache, dizziness, and delay brain aging. 8. Adjust the reasonable distribution of potassium, sodium, magnesium, calcium, phosphorus and chloride ions in the body.

The effect of negative potential is processed by high-tech, and the therapeutic apparatus is converted into a negative high-voltage pulsating electric field, which comprehensively supplements the human body with negative electricity, improves the bioelectric energy of the human body, and enhances the ability of the body's cells to absorb beneficial substances such as nutrient oxygen and the ability to metabolize various acidic wastes. To achieve the function of activating cells, thereby promoting a series of physical and chemical reactions in various tissues and organs of the body, improving the functions of various organs in the human body, and enhancing the body's functions of self-balance, regulation, adaptation, nutrition, immunity, metabolism, repair, and detoxification.

1. Supplement negative ions, enhance bioelectricity, eliminate cell pathological potential, activate cells, and repair cell DNA connections. 2. Regulate autonomic nerves (autonomic nerves), excite parasympathetic nerves, and inhibit overexcited sympathetic nerves. 3. Activated globulin, improve immunity, self-healing power, reduce free radicals 4. Analgesic, sedative, soothing, anti-inflammatory, and promote wound healing. 5. Promote ATP synthesis, accelerate the decomposition of carbohydrates, proteins, fats and other substances, and promote redox reactions.
2. Increase bone density and eliminate various skeletal joint inflammations. 7. Promote child development, delay aging, prevent senile dementia, cerebral atrophy, Parkinson's

disease. 8. Activate liver and kidney cells, improve detoxification and detoxification ability. 9. Improve lung capacity, enhance cardiopulmonary function, and accelerate the repair of pancreatic beta cells (islet cells)

3. Negative potential treatment indications Hypertension, hypotension, heart disease, diabetes, stroke sequelae, high blood lipid and blood viscosity, fatty liver, nephritis, rheumatoid, gout, osteoporosis, arthritis, cervical and lumbar spine, gastrointestinal inflammation, insomnia, constipation, Anemia, swelling, prostate, hemorrhoids, varicose veins, menopausal syndrome, bronchitis, emphysema, dizziness, tinnitus, rhinitis, skin inflammation, contraindications of negative potential therapeutic apparatus for sub-healthy people severe renal failure, malignant tumor attack, acute infectious disease attack, various bleeding diseases, high fever disease, women's pregnancy, recovery period after cardiac surgery should not be used.
4. The root causes of these chronic diseases are caused by the acidification of the body. Negative potential therapy uses different electric fields to change the root cause of human aging and chronic diseases - body acidity. Make the human body change to weak alkaline direction, so as to achieve the purpose of health. Therefore, medicine uses "headache, foot pain, foot pain" to treat the symptoms but not the root causes, but for chronic diseases that cannot be cured, the use of high-potential therapy can achieve obvious results.
5. Characteristics of Negative Potential Therapy 1. Different Improvement Responses After using high potential in the early stage, the human body will have a certain reaction called "improvement response". There is a "sick balance" in the diseased part of the body of a chronically ill person. After using the high-potential therapy device, each cell is re-adjusted and activated, which requires a large amount of oxygen nutrients, and the newly generated metabolic waste and the original accumulated waste are discharged at the same time, similar to when we usually increase the amount of exercise, the body will experience the same pain response temporarily caused by hypoxia. Therefore, in the process of use, the body will also experience a certain discomfort, usually within 3 to 5 days. Its degree varies with people's age, constitution, time and degree of illness, genetic factors and their own diet. This is a good phenomenon and is called the "improvement response". Specifically, there are the following aspects:
  6. 1. Those with acidic constitution: feel fatigued, limb weakness, drowsiness or joint pain, dizziness, anger. 2. Circulatory system: Hypertensive patients will have short-term blood pressure fluctuations, dizziness, rapid heartbeat, and temporary chest tightness and palpitation in patients with coronary heart disease. 3. Digestive system: heartburn, hiccups, gas, etc. 4, Diabetes: blood sugar fluctuations, dry mouth. 5. Stroke patients: feeling of sharp pain and soreness when the limbs have feelings.
  7. The improvement response is a normal rebound phenomenon that occurs when the body changes in a positive direction when the cells in the body are activated. Although this response is uncomfortable, it is an important first step on the road to health. Those who respond quickly, those who are good are quicker, those who are slow, those who are ill will react more slowly, those who are seriously ill will have more severe reactions, and those who are mildly ill will have milder reactions. These reactions are all temporary phenomena, and they are the stages that the constitution must pass through before it

improves. So you don't have to worry about it, just adjust and use it according to your own physical condition. After a few days of treatment, it will ease and disappear, and you will enter the recovery period of treatment. If these conditions are found, one must adhere to the treatment, which is the best recovery period for the treatment.

8. 1. Nervous system: Potential therapy device reduces the excitability of cerebral cortex pathology, enhances the process of internal inhibition, sedation, sleep, and a quiet environment during treatment, making the whole body comfortable and relaxed. The autonomic nervous system is more sensitive to high potentials, inhaling an appropriate amount of negative ions, Ozone, has a more obvious effect on regulating autonomic disorder, promotes the release of endogenous morphine substances (MLF), analgesia, and itching. 2. The negative potential therapy device of the blood circulation system has a two-way regulating effect on the blood vessels. If the blood pressure is low, it can be increased. Those with high blood pressure can reduce the negative potential through the regulation of the central nervous system. After the potential treatment, the myocardial contractility is strengthened. A slight increase in the pulse can stimulate the hematopoietic function of anemia patients, increase the content of oxidized blood protein and reduce the effect, slightly increase the red blood cells, white blood cells and lymphocytes, improve the coagulation function, slow down the erythrocyte sedimentation rate, reduce lipids and viscosity, and purify the blood.
9. 3. Respiratory system: Negative ions help to strengthen the movement of tracheal mucosa epithelial cilia, improve alveolar ventilation, ventilation function, relieve bronchospasm, increase lung capacity, adjust respiratory frequency, improve respiratory coefficient, increase oxygen inhalation and carbon dioxide excretion, Promote redox and improve respiratory function. 4. Urinary system: Improve renal function, increase urine output and excretion of metabolites.
10. 5. Digestive and metabolic system: regulate digestive function, increase appetite, start metabolism, and regulate endocrine. 6. Skeletal system: adjust the proportion of trace elements, increase bone density, improve osteoporosis, promote bone trauma healing, and relieve bone and joint pain. 7. Immune system: Potential therapy device activates immune cells and immune globulin, improves human immunity and natural healing power, and enhances human body resistance.
